Weighing Market overview 2023

350 Millions €  + 3 %

3 Manufacturers

Approx 100 companies

COFIP latest actions

1. Dialogue with Legal Metrology Authorities to harmonise some practices

A number of practices related to the legal metrology of scales are not clearly defined in the relevant texts

During COFRAC or LNE audits and administration surveillance, this leads to deviations that generate sometimes costly actions

This leads distortion of competition between organisations that do not apply the same rules

The COFIP has set up a working group which has identified 50 of these practices to be clarified

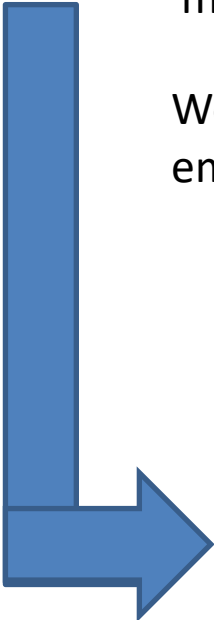

At the end of this dialogue with the authorities, these practices are summarised in a guide and will be applied by each COFIP member.

COFIP latest actions

2. Market Survey

It has always been difficult to measure the representativeness of COFIP members.

We managed to construct a simple study covering: turnover, number of employees, number of instruments checked by category, etc.

This action is now in place and the majority of COFIP members are responding to it.

The objective of having an overview of COFIP's representativeness has been achieved.
